Errata 11.4.1-3

Michael D. Ward & John S. Ahlquist

11/1/2018

Section 11.4.1-3

In definition 11.1 we define $F(t)$ as $Pr(Y^* \leq t)$ but then, in the definition of the survival function, we use T (instead of Y^*), where T is defined further up the page. To be consistent the T in the survival function (11.1) should be Y^*.

On page 228-229: After defining the Weibull Accelerated Failure Time model, let u_i EV_1 and σ be parameterized as $1/p$.

On page 229, in the definition of the Weibull distribution in the section "In case you were wondering": $E[T]$ should be $\lambda * \Gamma(1 + 1/p)$ (not plus).
